

2003 Washington State Math Championship

Unless a particular problem directs otherwise, give an exact answer or one rounded to the nearest thousandth.

Algebra - Grade 6

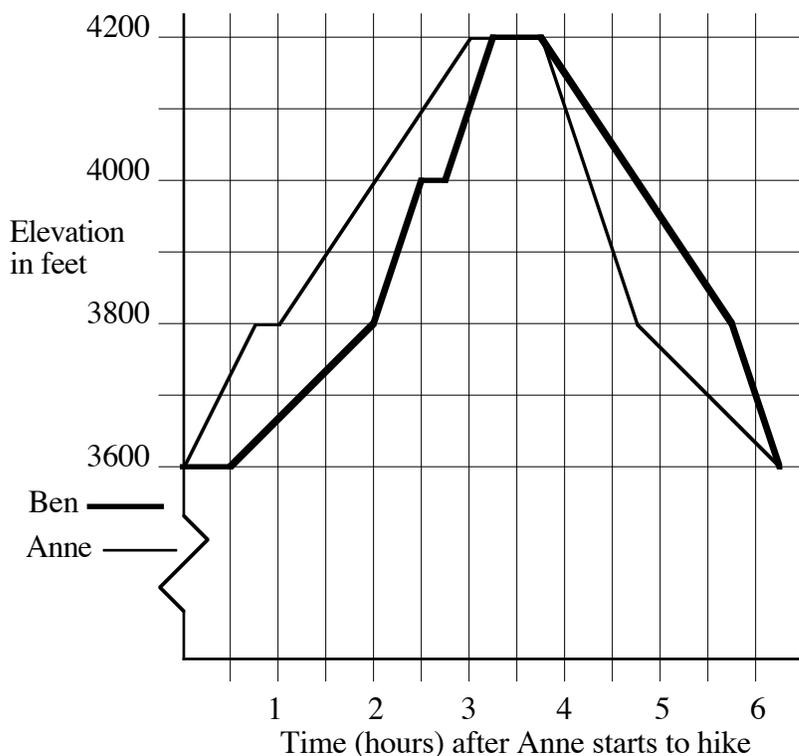

1. What is the sum of the reciprocals of the first 5 positive integers? (Express the answer as a reduced mixed number.)
2. The amount of interest is (always) proportional to the interest rate. If an account generates \$24 when the interest rate is 3.2%, how much will it generate when the interest rate is 3.8%?

3. The first 3 figures of a sequence are shown. How many small triangles are in the first 10 figures?

4. 2003 is a prime number. What is the next year after 2003 that will be prime?
5. If $3M - N^3 = 2003$ and $M - N^3 = 1$, what is the sum of the prime factors of M ?

6. Ben Thayer and Anne Back each hike to the top of a mountain and back by the same route. Anne rests once on her way to the top. How long is it from the time that she leaves this resting point until Ben arrives there?

7. Ben Thayer and Anne Back each hike to the top of a mountain and back by the same route. At one time in their hike Anne is changing her elevation twice as fast as Ben. At another time in their hike Ben is changing his elevation 3 times as fast as Anne. How long is it from the beginning of one of these times to the beginning of the other?
8. What is the sum of $3 + 6 + 9 + 12 + \dots + 990 + 993 + 996 + 999$?
9. Six "45s" fit one album; 3 albums fit on 2 tapes; 4 tapes fit on 3 CDs; and 7 CDs fit on one DVD. How many "45s" on 5 DVDs?
10. The height of toy rocket in feet, h , is given by $h = vt - \frac{1}{2}gt^2$ where v is its initial velocity in feet per second, t is the time since launch in seconds and g is the earth's gravitational constant of 32 feet / second². If its initial velocity is 130 feet / second, how many feet high is the toy rocket after 5 seconds?
